

DAMANHUR ALCHEMY SCHOOL

## THE VIAGGIO ELEMENTS

These elements support the elements we distill.

The physical moods we distill are laid on top of these to connect them to the 5 basic elements of alchemy.

- **Salt** is the metals, it accelerates, unites and stabilizes.
- **Sand** is the Earth, for organic conditions
- the **Water**
- **Ash** for the Fire element

They are Elements in their pure state, unlike others that we can collect alchemically, representing the river, sea or land, instead these are Mr. fire, Mrs. water etc...

They represent the element in its pure state and they serve as a support on which to rest the substances we are going to create.

*"You have to be alchemists, you have to practice and not theorize; you have to do things and, for everyone, one thing will have more effect than another because everyone is different even though they have the same laboratory. Experimentation really has to be done. "Falco"*
